EXPERIENCE

General Assembly, New York — *Software Engineer Immersive Student*

February 2022 - May 2022

Software Engineer Immersive boot camp where I learned Front-End and Back-End development. This helped me with becoming a well-rounded Full-Stack developer. I learned coding languages such as JavaScript, CSS, HTML, React, and Python. I learned how to use MongoDB and Heroku to deploy Back-End APIs. I would later learn Django, PostgreSQL and MySQL to deploy databases and data-structures. Using what I learned, I was able to develop some very interesting and fun programs. I learned to work both as a solo developer and in groups. This has been an eye opening experience and I hope to take this with me into the professional world.

WORK EXPERIENCE

Memorial Sloan Kettering Cancer Center - RARC, New York — *Animal Research Technician*

March 2019 - March 2020

- ANIMAL CARE: Provided routine care of research animals.
- Administered medications (pills, injections) as instructed.
- Maintained records in an organized and up-to-date manner.
- REGULATORY COMPLIANCE: Assisted in ensuring compliance with regulatory requirements related to care of laboratory animals.
- Communicated data to all NYULMC staff on the appropriate level

EDUCATION

CUNY Hunter College, New York — *Bachelor of Arts Psychology*

September 2013 - June 2016

General Assembly, New York — *Software Engineer Immersive*

February 2022 - May 2022

SKILLS

PowerPoint | Adobe Photoshop HTML | CSS | JavaScript | Python NodeJS | Express | MongoDB | PostgreSQL | MySQL | Heroku | Flask

SOFT SKILLS

Multi-tasking | Proficient Typist | Problem/puzzle Solving | Teamwork oriented | Effective Communicator | Attention to Details

LANGUAGES

English - Native, Bilingual Proficiency

Cantonese - Native, Bilingual Proficiency

Mandarin - Limited working Proficiency

PROJECTS

Whack a Diglett(03/22) — Front-End game made with JavaScript, HTML and CSS. My own custom take on Whack-a-mole

Front-End React Build(04/22) — Fetch based API website made using React.

Backrub.Wiki(04/22) — 3 person group project where we created a website that was an API of tech articles from the NYT for the last 20 years. The Front-End was made with React and the Back-End was made with MongoDB.
